

The GVS Group

In over 45 years of history, GVS has evolved from a supplier of components for the healthcare sector to a global group that produces highly technological diversified filtration solutions.

Wide range of products and custom design expertise

GVS produces a wide range of filter materials, filters and off-the-shelf components in all its divisions, enabling its customers to reduce the design time for new product launches.

All the GVS divisions work in highly regulated environments and the Group therefore operates with extremely high-quality standards. Thanks to its research and development centres located all over the world, GVS is also able to offer an extremely efficient and personalized service to meet its customers' needs: from product conception and design to testing and mass production.

Dynamic and flexible structure

GVS has developed a streamlined, dynamic and technologically advanced structure that has made it possible to achieve constant and balanced growth. The Group currently employs a total of 4869 people who work in automated assembly departments, in lines for the production and processing of filter membranes and in class 10,000 and 100,000 cleanrooms.

Global growth

The GVS Group has always paid great attention to research, development and innovation of its products and processes and has shown a strong trend towards development in global markets since its foundation.

In addition to the corporate headquarters in Bologna, GVS currently has 19 plants in Italy, United Kingdom, Brazil, United States, China, Mexico, Romania e Puerto Rico, and 29 commercial offices located all over the world. GVS has always adopted a "glocal" approach: it operates locally in contact with its customers, but relies on the strength of a global network.

Cell Culture Units

Multi-layers Cell Factory

Multi-layers cell factory is the adherent cells' ideal choice for industrial mass production, laboratory operations, and large-scale cell cultures. Compared with other brands, GVS cell factory has good performance in culture.

- Polystyrene (PS) material meet USP VI medical grade. Combined with heat treatment process of injection molding, the toughness product is not easy to be damaged while transferring.
- Meanwhile, the product has undergone a three-level sealing test before delivery to ensure airtightness.
- The production processes in Class-C workshop to comply with ISO13485 by using professional automatic production line.
- With the perfect quality management system, each batch of products has been tested to ensure the consistency and stability of product performance between different batches.

Multi-layers Cell Factory

- Double wild-mouth design improves the speed of filling and harvesting liquid, with hardly bubbles, Also conducive for gas exchange and high-density cell culture.
- Equipped with quick-fit seal cap (patented product), it can switch between airtight and breathable state in conventional environment (greenhouse) to meet the needs of dissolved oxygen and exhaust in different

culture stages of cells and viruses.

- The cell-factory is equipped with a complete set of sealed pipeline system, which can be connected with the liquid inlet and receiving system pipeline, and the liquid input and output are carried out by peristaltic pumps or pressure systems.

Roller Bottle

Roller Bottle is a kind of disposable container which can meet the requirements of large-scale production of cells and tissues in both experimental and industrial production, and is widely used in the culture of animal and plant cells, bacteria, viruses and so on.

Material: polystyrene (PS) ,which meet USP VI medical grade.

- Vacuum plasma surface treatment technology, enhance cell adhesion ability, can also be coated with collagen on the inner surface according to customer requirements.
- cGMP standard production, each batch passes the performance test, perfect quality system from the source to ensure product quality and consistency.
- Sterile, no endotoxin, no heat source, no cytotoxicity.
- Injection, pull and blow molding process, the product bottle mouth is smooth and round, the contact sealing with the cap is better, and the product residue is less.
- 5L cell bottle adopts two-stage design to increase the contact area. The contact area between the roller bottle and the rotating bottle machine adopts the frosted structure to increase the friction coefficient of the roller bottle and reduce the sliding phenomenon.

High Efficiency Erlenmeyer Flask

Material: USPVI PETG material or Bisphenol A-free PC material.

Specification: 3L, 5L.

Applications: Widely used in microbiology, cell biology and other fields, can be used with large capacity culture shaker, mainly suitable for suspension cell culture.

Features

- Adopts imported injection, pull and blow molding process.
- According to cGMP standard production, no direct contact, product consistency is good.
- The breathable film area of shaker cap is larger than that of similar products, increasing the breathable capacity, suitable for high-density cell culture, the working volume can be filled to 60%-80% of the total volume, and the cell yield is higher.
- The bottle neck designed with a natural arc, and the handle is designed in accordance with the ergonomic design, which is convenient to take the bottle and transfer the liquid.
- Equipped with 0.2 μ m barrier breathable membrane, optional liquid transfer cap, or customized bottle cap suitable for liquid transfer according to customer process requirements.
- The product has passed sterility testing, endotoxin testing, DNase free, RNase free.

Conical Erlenmeyer Flask

Material: USP VI PETG material or Bisphenol A-free PC material.

Specification: 125ml, 250ml, 500ml, 1000ml

Application: It is suitable for cell lines with high oxygen requirements. It is an economical cell culture tool that can be used to cultivate bacteria, fungi, animal and plant cells in suspension culture media, and can also be used for the preparation, mixing and storage of medium.

Features

- According to c-GMP standard production, no personal contact, great consistency.
- The bottle cap using high-strength HDPE material and is designed with a PTFE hydrophobic and breathable membrane. After contact with liquid, it will not affect the sealing and ventilation effect of the breathable membrane.
- The scale is clear and accurate, which is convenient for observing the medium capacity.
- Aseptic packaging.

Baffled Erlenmeyer Flask

Material: PC, comply with USP VI standard.

Specification: 125 ml, 250 ml, 500 ml, 1000 ml.

Application: Designed with baffles to increase fluid shear stress, reduce viscosity from cell-free DNA and cell debris. Provide effective agitation for more efficient aeration to increased oxygenation and mixing.

Features

- According to c-GMP standard production, no personal contact, great consistency.
- The bottle cap using high-strength HDPE material and is designed with a PTFE hydrophobic and breathable membrane. After contact with liquid, it will not affect the sealing and ventilation effect of the breathable membrane.
- The scale is clear and accurate, which is convenient for observing the medium capacity.

Cell Culture Flask

- According to different surface treatment processes, cell culture flasks can be divided into hydrophilic cell culture flask and hydrophobic cell culture flask.
- Under the same environment, the clone formation rate and growth generation of cells cultured in the cell culture flasks have reached the index of similar international products.
- High quality polystyrene (PS) materials, USP VI medical grade.
- Plasma surface treatment can maximize adhesion of cells. Culturing for 48h, Vero cell growing condition is good as international famous culture flask.
- Innovative angled neck design provides good pipette and cell scraper access.
- The whole production is in the C-class purification

workshop. According to ISO13485 quality system management and the use of automatic equipment production, no direct contact with personnel, good product consistency, and small differences between batches.

- Sterile, DNase-free, RNase-free, endotoxin content < 0.1 EU/mL.
- According to different culture requirements, there are vent cap and seal cap optional.
- Upgrade the flask angle and bottom arc design to easily obtain a complete growth surface and make subsequent operations easier.

Multi-layer Cell Culture Flasks

Multi-layer cell culture flasks 3-layers and 5-layers are available, which providing 525 cm² and 875 cm² cell growth surface area respectively, they are equivalent to 3 and 5 times the surface area of the T-175 culture flask. The higher-capacity design make cell culture faster, easier, and more efficient.

- Cap Type: Plug Seal Vent
- Surface: TC treated
- Flask Body: Polystyrene (PS)
- Flask Cap: High-density Polyethylene (HDPE)
- Filter Membrane: Polytetrafluoroethylene (PTFE)
- Conforming to USP Class VI standards

Five-layer flasks comparison

Three-layer flasks comparison

Vent Cap

Plug Seal Cap

Feature

- The medium can be evenly distributed across each layer, providing a consistent culture environment for uniform cell growth
- The surface treatment of each layer is uniform and stable, effectively guaranteeing large-scale cell cultures
- Cells and reagents can be mixed directly in the flask, with no leakage or splash between layers, saving time and reducing the risk of contamination
- Suitable for 10mL serological pipets to liquid aspiration/replenishment or cells harvesting directly in the flask
- Every flask is printed lot No. for quality traceability
- Sterilized by irradiation, SAL 10⁻⁶
- DNase/RNase free, Non-pyrogenic, Non-cytotoxic

T150 U-shaped Cell and Tissue Culture Flask

Cell culture flasks are one of the most widely used consumables by life science researchers in cell-based experiments and assays. Compared to common rectangular cell culture flasks, GVS U-shaped cell culture flask features a rounded shoulder design that effectively reduces dead corners for pipettes and cell scraping tools, while also providing a more comfortable grip. This design enhancement ensures efficient cell harvesting processes and a more ergonomic tissue culture experience for researchers, without compromising cell growth capabilities.

Specification

- Growth Area: 150cm²
- Type of Cap: Plug Seal Vent
- Surface: Non-treated TC-treated
- Materials:
Flask Body: Polystyrene (PS), Flask Cap: High-density Polyethylene (HDPE),
Filter Membrane: Polytetrafluoroethylene (PTFE), all conforming to USP Class VI standards

Feature

- U-shaped rounded flask shoulders achieve more efficient cell harvesting that reduces dead corners, which pipette and cell scrapers difficult to reach
- GVS flask boasts a lower profile compared to rectangular culture flasks of the same growth area, conserving valuable space within CO₂ incubators
- Featuring a larger bottle neck diameter compared to rectangular culture flasks, supporting the entry and exit of 50mL pipettes
- Providing writing areas on both shoulders of flask body for quick noting
- Providing volume graduations molded on both sides of flask body
- Positioning ring design on flask body edges supports stable stacking of multiple flasks
- 100% tested for production line leakage
- Sterilized by irradiation, SAL 10⁻⁶, DNase/RNase-free, non-pyrogenic and non-cytotoxic

Cell and Tissue Culture Products

GVS superhydrophilic cell culture product series is created by introducing polar groups onto their surfaces. This forms a durable and stable superhydrophilic surface that facilitates good adherent growth of various types of cells under different culture conditions, thereby improving cell yield. The treated surface also eliminates the need for unstable, time-consuming, and costly biological coating.

- Cell and Tissue Culture Flasks: T12.5 T25 T75 T182 T225 T300
- Cap Style: Plug Seal Vent
- Cell and Tissue Culture Plates: 6-well 12-well 24-well 48-well 96-well
- Cell and Tissue Culture Dishes: 35 mm 60 mm 70 mm 90 mm 100 mm 150 mm
- Materials: Flask/Plate/Dish Body: Polystyrene (PS), Flask Cap: High-density Polyethylene (HDPE), Filter Membrane: Polytetrafluoroethylene (PTFE), conforming to USP Class VI standards

Feature

- Unique superhydrophilic surface treatment technology provides better adherence for cells, promoting rapid cell growth and increasing yields.
- This ensures continuous and uniform cell adherence, and can be used for adherent cultures of primary cells, neuronal cells, stem cells and other fastidious cells that have more stringent requirements for the hydrophilicity of the culture surface.
- Cells can adapt quickly to a serum-free or low-serum culture environment, meeting the needs of experiments that require the elimination of interference by serum components or that require reduced serum levels, thus reducing the cost of cell culture.

Water droplets on ordinary surfaces are relatively full

Super hydrophilic

Contact angle $<60^\circ$

Poly-D-Lysine-coated Products

Poly-D-Lysine serves as a positively charged extracellular matrix, fostering nonspecific cell attachment. Upon application to solid-phase culture surfaces, it heightens the electrostatic interaction between negatively charged ions on the cell membrane surface and positively charged ions on the culture surface. This enhancement bolsters cell attachment rates in serum-free or low-serum culture settings and reinforces the absorption of serum proteins and extracellular matrix proteins onto the culture surface.

GVS Poly-D-Lysine-coated Products are available in a variety of forms, including culture plates and dishes. The product surface is pre-coated with Poly-D-lysine, which facilitates the attachment growth, proliferation and differentiation of cells that are difficult to culture, such as neurons, glial cells and transfected cell lines.

Inoculate PC-12 cells onto a poly-D-lysine-coated 24-well cell culture plate at a density of 5×10^5 cells/well. After 24 hours, observe under a microscope: The cell morphology appears normal, exhibiting an attachment rate surpassing 90% and the viability of attachment cells exceeding 95%.

Specification:

- Poly-D-Lysine-coated culture plates (6-well, 12-well and 24-well)
- Poly-D-Lysine-coated culture dishes (35 mm, 60 mm and 90 mm)

Features

- Utilizing premium poly-D-lysine characterized by a molecular weight ranging from 75 to 150 kDa, boasting high viscosity and robust cell attachment properties
- Enhance the attachment, growth, and specialization of challenging cell types, such as neurons, in culture
- Synthetic poly-D-lysine aims to prevent the stimulation of biological activity resulting from the introduction of natural polymers, impurity proteins, and similar factors
- Following validation through diverse cell culture tests, the attachment rate of cells surpasses 90%, with the viability of attachment cells exceeding 95%
- We offer a range of pre-coated poly-D-lysine product forms ready for use, catering to diverse testing requirements of our customers
- Lot number of each package bag is printed to ensure quality traceability
- Sterilized by irradiation, SAL10-6, DNase/RNase-free, and non-pyrogenic

Ultra-low Adsorption Surface

Enable cell spheroid culture in a rapid, consistent, and highly reproducible manner

Compared with the traditional two-dimensional (2D) culture model, the three-dimensional (3D) spheroid model can better simulate the three-dimensional cell networks, cell-matrix, and cell-cell interactions. Therefore, the 3D spheroid model is of great significance for drug screening, in vitro tumor research, and the exploration of stem cell differentiation and sorting.

Ultra-low Adsorption Surface of GVS is designed for spheroids (e.g. 3D tumor spheroid) and organoid cultures, providing a variety of product forms such as culture plates, culture dishes, and culture flasks. After the surface of the product is subjected to special gel treatment, the product has extremely strong anti-protein adsorption and anti-cell attachment, and there is almost no cell attachment on the surface, which is conducive to the suspension growth of cells and enables cell spheroid culture in a rapid, consistent, and reproducible manner.

- Specification: Ultra-low adsorption cell and tissue culture plates (6 wells; 96 wells, flat bottom; 96 wells, U bottom)
Ultra-low adsorption culture dishes (60 mm; 100 mm)
Ultra-low adsorption culture flask T75
- Material: Polystyrene (PS), Flask cap: High-density polyethylene (HDPE), conforming to USP Class VI standards

Features

- The Ultra-low Adsorption Surface has a covalently bonded hydrogel layer with extremely strong anti-protein adsorption and anti-cell attachment, which can effectively inhibit cell attachment and minimize protein adsorption, enzyme activation, and cell activation
- The surface is non-cytotoxic, biologically inert and non-degradable
- The coating on the surface is firm and convenient for daily experimental operation
- It has been verified by different cell culture tests that there is almost no cell attachment on the surface and enables cell spheroid culture in a rapid, reproducible, consistent, and reliable manner
- Provide a variety of Ultra-low Adsorption Surface to meet different experimental needs of customers
- Each package bag is printed with lot No. for quality traceability
- Sterilized by irradiation, SAL 10^{-6} , DNase/RNase-free, non-pyrogenic, and non-cytotoxic

Non-treated

TC treated

Ultra-low Adsorption Surface

Cell Growth Status of MCF-7 Cells on Day 6 of untreated surface product (Left) and GVS Ultra-low Adsorption Surface (Right)

Application

- Construction of 3D Tumor Spheroids and Embryoid Bodies
- Formation of Neurospheres
- Screening of Suspended Cells
- Studies on Stem Cells
- Studies on Cancer Cell
-

Cell Culture

Cell culture tests of different surface products GVS has better cell spheroid-forming performance

Figure1:Sphere-formation Assay

Figure 2: Cell Diameter Measurement
after Spheroid-forming Culture

Figure 1: MCF-7 cells were seeded in U-bottom 96-well culture plates of different products at a seeding density of 5000 cells/well, and the growth status of the cells was observed regularly.

Figure 2: After the 13th day of cell culture, each well of each plate was photographed using a fluorescence microscope, and the length of the spheroid diameter was measured.

The results showed that compared with the similar imported products, the growth status of cells cultured on the surface of GVS was significantly better and the spheroid size was also larger when the cell culture time was not more than 13 days.

Single-Use Spinner Flasks

Single-Use Spinner Flasks are usually used as small bioreactors for cell suspension culture paired with magnetic stirring devices. GVS Single-Use Spinner Flasks are specifically designed for the microcarrier-based suspension culture of adherent cells such as MSCs. Each set consists of a three-neck culture flask and a stirring paddle with an integrated magnet, compatible with commercially available low-speed cell culture magnetic stirrers. The magnetic force generates rotation, facilitating smooth and uniform stirring, maintaining a stable environment for cell suspension culture. The products are also suitable for non-adherent cell suspension culture, and related process optimization.

Specifications: 125 mL, 250 mL, 500 mL

Material: Flask Body: Polystyrene (PS) , Flask Cap: Polypropylene (PP), Paddle: Polystyrene (PS) , Shaft: Polyoxymethylene (POM), Filter Membrane: Polytetrafluoroethylene (PTFE) , conforming to USP Class VI standards; Magnet: Neodymium Iron Boron (NdFeB)

Product Structure

Feature

- Manufactured with raw materials conforming to the USP Class VI standards, produced in a GMP cleanroom
- The flask body is made of high-transparency polystyrene (PS), with clear molded-in graduations for easy observation
- The POM shaft has high mechanical strength, low friction coefficient, and good self-lubrication, allowing the paddle to rotate stably for extended periods
- The design of the stirring paddle has undergone precise flow field analysis to achieve smooth and uniform stirring, maintaining a stable environment for cell suspension culture
- Each product set is equipped with a 0.22 μm PTFE hydrophobic filter membrane vent cap, preventing bacterial contamination while allowing good gas exchange
- Each product set is supplied in independent double-layer medical packaging on which product batch number is printed for easy traceability
- Compatible with most commercially available low-speed cell culture magnetic stirrers. The 125 mL specification is equipped with a stable base for secure placement on the stirring device
- Extremely Low Extractables Levels and excellent biosafety
- Sterilized by irradiation, SAL 10^{-6} ; DNase/RNase-free, non-pyrogenic and non-cytotoxic

Mixing culture flask for biological culture

Features

- With magnetic coupling, suitable for culture in suspension cells or microcarriers
- Height adjustable blade and aseptic design, the mixing part is all in the flask
- Wide Mouth design facilitates gas exchange
- The borosilicate glass meets the USP I and ASTM E 438I standards, Class A requirements
- Autoclavable

Mixing culture flask for Microcarrier

Features

- With simple and flexible coupling, suitable for culture in microcarriers
- Thanks to glass ball, it provides a very gentle mixing effect, reduces shear stress and protects cells
- Wide Mouth design facilitates gas exchange
- The borosilicate glass meets the USP I and ASTM E 438I standards, Class A requirements
- Autoclavable

Multi-Well Cell Culture Plates

- High quality polystyrene (PS) raw material, conforming to USP VI medical grade, excellent optical and chemical properties to ensure product stability and easy microscopic observation.
- Vacuum plasma surface treatment and uniform well to ensure well consistency.
- Cellular biocompatible (ISO:10993), sterile and endotoxin free.
- The lid well design ensure the gas exchange, reduce the risks of cross-contamination and evaporation.
- Alphanumeric marked wells, easy for identification.

Cell Culture Dish

Cell culture dishes are made from polystyrene (PS) materials and are suitable for laboratory inoculation, marking, weighing, separation and treatment of tissue or cells.

Features

- Uniform thickness, no distortion for excellent observation.
- Easy to grip with gear ring design, reduce contamination risk.
- The ring protrusion on the cover is closely combined with the bottom to facilitate storage and reduce medium volatilization.
- Open petri dish lids with regular protrusions are available.
- Vacuum plasma surface treatment for ideal adhesive performance.
- No pyrogen, endotoxin free, no cytotoxic.
- Sterile by Gamma irradiation, SAL<10⁻⁶.

Glass Bottom Dishes

GVS 35mm Glass Bottom Dishes offer the flexibility to convert your culture device into an imaging device. This allows a smooth transition from cell culture to cell analysis with the same seeding density, media volume, and culture conditions. The Dishes combine the convenience of a standard 35 mm cell culture dish with the imaging benefits of cover glass to provide the optimum optical characteristics required for high-magnification microscopy and confocal image analysis.

Application and Features

- Glass bottom thickness: 0.16-0.19mm
- TC Treated
- Working volume: 3ml
- PS material, the bottom glass is made of borosilicate glass material, medical grade glue bonding
- No cytotoxicity, no pyrogen, no endotoxin
- Sterile.

Used in confocal laser microscopy, fluorescence microscopy, phase contrast microscopy, live cell imaging, differential interference contrast, fluorescence in situ hybridization (FISH) and other cell culture observation experiments

Micro-Centrifuge Tube With Safe-Lock Cap

Made of high quality of transparent PP material, the new special design of safe lid can be fitted tightly with the rim of tube, and avoid accidental cap opening during centrifugation and thermal stress, especially applicable for expensive or hazardous samples, etc. The thin membrane lid can be pierced, suitable for the toxic biological substances without generating aerosols.

Features

- Open and close conveniently with one hand; Special safe-lock cap, tight-fitting lid provides a precise and safety sealing.
- Thin membrane lid can be pierced by a syringe; Accurate molded graduation for volume estimation.
- Flat lid and large frosted area on tube for easy sample identification.
- Withstand centrifugation up to 15000 xg (1.5 ml & 2 ml)/25000 xg (5 ml); Guaranteed functionality between -86°C to 121°C.

Low Binding Microcentrifuge Tubes

Minimal valuable samples loss

Gene therapy and vaccine production often involve various types of purification for proteins, DNA, and other substances. Since nonspecific binding to plastic containers will lead to the loss of valuable samples, the purification processes often depend on high-quality plastic products for sample processing and storage. The smaller the sample volume is, the more important it becomes to reduce the binding between the sample and the container used.

The low binding microcentrifuge tubes of GVS is optimized for protein and DNA analytics. These tubes are made using a unique high-purity polypropylene polymer material that does not require any surface coating, such as siliconization. Strict quality control is implemented in accordance with ISO9001 and ISO13485. The stable quality ensuring significantly reduces binding between samples and plastic surface, minimizing sample loss and achieving a maximum recovery rate of your precious samples and more accurate analysis results.

- **Material:** Polypropylene (PP), conforming to USP Class VI standards
- **Capacity:** 0.5 mL, 1.5 mL and 2.0 mL

Cleanliness Test Standard for GVS PCR

GVS offers top quality consumables that have successfully passed the PCR clean test. These consumables are specifically designed for nucleic acid-related test operations, including nucleic acid extraction, purification, PCR, qPCR, and more.

The products passing PCR clean test meet the following standards:

- | | |
|---------------------|-----------------------------|
| ✓Human DNA-free | ✓DNase/RNase-free |
| ✓PCR inhibitor-free | ✓Non-pyrogenic/No endotoxin |

Standard for Sterility Quality Test

To minimize the influence of consumable contamination and adhere to strict analysis standards, GVS has implemented stringent sterility quality test standards. These standards encompass the production conditions, ensuring high cleanliness, as well as sterilization processes. This comprehensive approach strikes for optimal sterility levels, satisfies the most demanding analysis requirements.

The products passing sterility quality test meet the following standards:

- | | | |
|---------------------|-----------------------------|-------------------|
| ✓Sterile | ✓Human DNA-free | ✓DNase/RNase-free |
| ✓PCR inhibitor-free | ✓Non-pyrogenic/No endotoxin | |

Quality Assurance

The sterility level meets the requirements of ISO11137, SAL < 10⁻⁶; pyrogen/endotoxin < 0.03 EU/mL; Human DNA < 0.03 pg/μL; DNase < 1×10⁻⁶ Kunitz units; RNase < 1×10⁻⁹ Kunitz units; PCR inhibitor ≤ 2 cycle offsets.

Applications

- Preparation and storage of proteins, peptides, or antibodies
- Storage of virus to prevent viral titer reduction
- Storage of cell suspension
- Enzyme catalysis test
- DNA and RNA sample preparation and storage

Features

1. Selected special raw materials

- Made of special high-purity polypropylene (PP) polymer with stable product performance
- High-transparency PP tube body for easy capacity and scale observation
- Working temperature range: -80°C~121°C (no deformation after autoclaving with open lid)

2. Excellent low protein/low nucleic acid binding

- Special materials can effectively reduce the nonspecific binding of protein/nucleic acid to the tube surface.
- No surface coating (e.g., silicification) on the tube wall can reduce sample binding and interference to samples.
- Samples of different proteins and nucleic acids can be ensured to the maximum recovery, with a recovery rate over 90%.

3. Ingenious design

- Lid lock prevents accidental opening of cap and evaporation of samples during long-term storage, and ensures operating safety.
- Smooth and transparent tube body with clear graduation, designed with a frosted writing area, makes it convenient for recording.
- Resealable bag packing (50 per bag) to reduce the risk of contamination.

4. Rigorous performance test

- The product has been tested for 18 items, including tightness, folding resistance of flipped cap, centrifugal force, solvent resistance, extractable and accelerated aging, which shows stable performance.
- The maximum centrifugal force for 1.5 mL, 2 mL is RCF 25,000 xg; the maximum centrifugal force for 0.5 mL is RCF 30,000 xg.
- Available in sterilized or non-sterilized, sterilized by irradiation, SAL 10⁻⁶
- DNase/RNase-free, Non-pyrogenic, human DNA-free, PCR inhibitor-free

Note:

1. This product is not recommended for long-term sample storage for samples containing benzene, benzyl alcohol, or chloroform solvents.
2. Re-autoclaving of sterilized low binding microcentrifuge tubes may result in yellowing of the materials but does not affect the usage for the products.
3. The package can be removed and opened for autoclaving sterilization for one time. Repeated autoclaving sterilization is not recommended.

Comparison Test Results of Typical Nucleic Acid Recovery

Low DNA Microcentrifuge Tube - Minimal nucleic acid samples loss

Microcentrifuge tubes from different suppliers are used, with 10 in a group, to fill an equal volume of 150 µL (0.1 ng/µL) of DNA solution diluted with DNA diluent, and incubated at 37°C for 24 h. The DNA recovery rate was determined by real-time PCR technology.

The Low DNA microcentrifuge tube of GVS has a high recovery rate for nucleic acid samples and can minimize the loss of nucleic acid samples.

Comparison Test Results of Typical Protein Recovery

Low Protein Microcentrifuge Tubes - Minimal protein samples loss

Microcentrifuge tubes from different suppliers are used to fill an equal volume of 1 µg/mL FITC-IgG protein solution, and stored in the dark at room temperature and 4°C. Measure the fluorescence values at 1 h, 3 h, 5 h, and 24 h, and calculate the average recovery rate (n = 6). The Low Protein microcentrifuge tube of GVS has a higher recovery rate for protein samples and can minimize the loss of protein samples.

Metal-Free Centrifuge Tubes

The metal-free centrifuge tubes are made of transparent polypropylene (PP). They have been specially treated to ensure that more than 30 kinds of trace metal elements that can interfere with experiments are kept at levels of less than 1ppb (ICP-MS method). They are ideal for a variety of environmental tests such as water analysis, and other applications where samples may be contaminated by heavy metals in centrifuge tubes.

Features

- Specification: 15 mL 50 mL
- Cap Type: Flat
- Bottom Type: Conical
- Packaging: Re-sealable Bag Paper Rack Bulk

Materials

- Tube Body: Polypropylene (PP),
- Tube Cap: High-density polyethylene (HDPE), conforming to USP Class VI standards

Centrifuge Bottle

The conical centrifuge bottles are economical laboratory consumables for large-capacity liquid centrifugation and are suitable for large-scale cell harvesting, as well as plasmid and protein purification. These products can help researchers reduce centrifugation cycles and increase efficiency in experiments and production.

- Specifications: 225 mL 250 mL 500 mL 600 mL
- Bottom Type: Conical
- Materials: Tube Body: Polypropylene (PP), Tube Cap: High-density polyethylene (HDPE), conforming to USP Class VI standards

Features

- The bottle body is made of high-quality PP, which is resistant to high temperatures and high pressure, and has smooth inner and outer surfaces and a uniform gloss.
- Clear graduation lines facilitate easy observation, accuracy within $\pm 2\%$
- 225 mL/250 mL maximum RCF: 7,500 $\times g$, 500 mL/600 mL maximum RCF: 6,000 $\times g$
- Screw seal cap design applied, 100% undergone for production line sealing performance tests to ensure zero leakage
- Recommended liquid feeding volume: 80% of max graduated volume
- Working temperature range: -80°C – 121°C
- Sterilized by irradiation, SAL 10^{-6}
- DNase/RNase-free, non-pyrogenic

Closed System for Centrifuge Tubes/Bottles

In the industrial production of biological products, reducing the potential risk of contamination during processes such as liquid transfer and sampling is crucial. Pairing centrifuge tubes with sterile transfer caps and tubing systems can effectively prevent contamination issues associated with open operations.

GVS has introduced a Closed System for Centrifuge Tubes/Bottles, made from USP Class VI-compliant materials, manufactured in GMP-standard cleanrooms, and subjected to rigorous tests including extractables studies and biocompatibility assessments. These systems are suitable for enclosed sampling and aseptic liquid transfer in bioprocessing. It comes with double-layer packaging, and each system is equipped with a separately packaged plug seal cap, which can be replaced for supporting subsequent operations, such as centrifugation and testing.

Specifications

- Matching tubes/bottles: 50 mL, 250 mL, and 500 mL
- Type of tube connector: MLL connector
- Matching tubing: Two-port
- Packaging: Double-layer outer medical packaging
- Material: Bottle cap (HDPE) Inner tube (PTFE) Outer thermoplastic tube (TPE) MLL connector (PP)
- Filter: Housing (PP) Filter membrane (PTFE), conforming to USP Class VI standards

Features

- Raw materials compliant with USP Class VI standards, products feature extremely low extractable levels and excellent biosafety
- Injection molded bottle cap sharply decrease leakage and residue
- Inner tube can be extended to the bottom to ensure complete transfer
- 0.22μm PTFE syringe filter balances the internal and external pressure during liquid transfer while maintaining sterility
- Separately packaged plug seal cap can be replaced for supporting subsequent operations, such as centrifugation and testing
- Tubing length and diameter can be customized according to specific needs
- Working temperature range: -80~60°C
- Sterilized by irradiation, SAL 10⁻⁶; DNase/RNase-free, non-pyrogenic, non-cytotoxic

PS Centrifuge Tubes

PS centrifuge tubes are made of premium polystyrene (PS), offering greater transparency compared to PP material tubes, which makes it easier to observe the liquid inside the tube. These tubes are suitable for various laboratory applications such as low-speed centrifugation, sampling, dispensing, and storage of liquids in cell biology, immunology, microbiology, and molecular biology. They can also be used for cell culture.

Specifications

- Volume: 15mL 50mL
- Bottom Type: Conical
- Cap Type: Flat
- Packaging: Paper Rack/Plastic Rack/Bag
- Materials: Tube Body: Polystyrene (PS); Tube Cap: High-density polyethylene (HDPE); Tube Rack: Polyethylene(PE), conforming to USP Class VI standards.

Features

- Tube bodies are made of premium PS material, providing high transparency that facilitates easy observation.
- Tube body able to withstand weak acid and alkaline solutions.
- Easy-to-read graduations and an accuracy within $\pm 2\%$.
- Passed production line air-tightness test to ensure no leakage occurs.
- 15mL tube's cap comes with a leak-proof gasket.
- Both tube racks for 15mL and 50mL are reusable after cleaning.
- Maximum RCF: 3,000×g(15mL)2,000×g(50mL).
- Recommended Working Temperature: 20°C-60°C.
- Sterilized and non-sterilized available, sterilized by irradiation to SAL 10⁻⁶.
- DNase/RNase-free, non-pyrogenic and non-cytotoxic.

Bio Reaction Tube

Bio-reaction tubes are suitable for use in the high-throughput condition optimization process for suspension cell culture, including research and clonal selection of cell lines, culture medium optimization and recombinant protein development.

- Specification: 15 mL 50 mL 600 mL
- Bottom Type: Conical Self-standing
- Packaging: Re-sealable Bag Paper Rack

- Material: Tube Body: Polypropylene (PP); Tube Cap: High-density Polyethylene (HDPE); Membrane: Polyvinylidene Difluoride (PVDF), conforming to USP Class VI standards

Features

- Available in various sizes, including 15/50/600 mL, with options for conical or self-standing bottoms
- Inner/outer surfaces of the tube are smooth with an even luster
- The white silk screen on 15 and 50 mL tubes can be used for recording experimental data
- Hydrophobic vent cap for continuous gas exchange
- Sterilized by irradiation, SAL 10⁻⁶
- DNase/RNase-free, non-pyrogenic and non-cytotoxic

100mL Bio-reaction Tube

The GVS 100mL Bio-reaction Tube is made of PP material conforming to USP Class VI standards with defined composition, Animal Derived Component (ADC) Free, good chemical stability, uniform wall thickness, and excellent impact resistance. Equipped with a 0.22 μm PTFE hydrophobic vent cap that ensures a sterile environment while ensuring continuous ventilation. The round bottom design with large surface area and smooth wall transition facilitates efficient mixing, suitable for suspension cell and microbial culture, as well as for procedures such as density gradient centrifugation.

Specification:

- Volume: 100mL
- Material: Tube Body: Polypropylene (PP); Tube Cap: High-density Polyethylene (HDPE); Membrane: Polytetrafluoroethylene (PTFE), conforming to USP Class VI standards

Product Dimension(mm)

Note: Please select the appropriate adapter for use in accordance with the specifications and dimensions of this product and the centrifuge rotor while conducting centrifugation.

Features

- The tube body is made of high-quality PP material with defined composition, Animal Derived Component (ADC) Free, good chemical stability, and excellent impact resistance
- Round bottom design, with large surface area and smooth wall transition, facilitates efficient mixing
- 0.22 μm PTFE hydrophobic vent filter cap ensures a sterile environment while ensuring continuous ventilation
- Maximum working volume: 60mL; Maximum RCF: 6000 $\times g$
- Molded graduations are clear for easy observation
- 360° frosted writing area on upper tube body for convenient labeling and recording
- Temperature range: -80°C to 60°C
- Sterilized by irradiation, SAL 10⁻⁶; DNase/RNase-free and non-pyrogenic
- Shelf life: 3 years when stored in original unopened packaging in cool and dry conditions(15-30°C)

This product is compatible with common large-capacity centrifuge brand available on the market, such as T-brand.

CellWell Tissue Culture Plate Inserts

Tissue culture plate inserts are extensively used in a variety of cell tests, including co-culture tests, chemotaxis tests, and cell migration tests. With the membrane technology, cells that grow *in vitro* are more similar to those growing *in vivo* in terms of morphology and function. They are also used for studying cell functions such as cellular transport, absorption and secretion.

- Membrane Pore Size: 0.1 μm 0.4 μm 3.0 μm 5.0 μm 8.0 μm 12.0 μm
- Specification: 6-well 12-well 24-well
- Materials: Membrane: Polycarbonate(PC)/Polyethylene terephthalate(PET),
- Main Body: Polystyrene (GPPS), conforming to USP Class VI standards

Features

- Excellent transmittance of the PET membrane, facilitating observation by microscope; Compared to the PET membrane, cell adhesion is stronger on the PC membrane and its higher pore density enables easier exchange of transmembrane substances
- 3 configurations of cell culture plate inserts and a variety of membrane pore sizes are available to meet a variety of different experimental requirements
- Innovative nested edge design facilitates sample addition
- Special central suspension design protects monolayer cells while preventing cell culture medium loss
- Excellent chemical compatibility of the membrane makes it compatible with most staining and fixed reagents
- Sterilized by irradiation, SAL 10-6
- DNase/RNase-free, non-pyrogenic and non-cytotoxic

Chemical Compatibility

The PC membrane and PET membrane are suitable for histological fixatives such as methanol and formaldehyde, and also tolerate alcohol, amines, lipids, ethers, ketones and petroleum solvents (such as halogenated hydrocarbon and DMSO). In particular, the PET membrane has very good chemical applicability. However, strong acid and alkaline solutions are not recommended.

Pore Density

The PET membrane and PC membrane have a rated pore density. In comparison, the PET membrane has a lower pore density than the PC membrane but is superior in terms of its optical performance.

The central suspension design of our tissue culture plate inserts leaves a certain distance between the nest and the bottom, so that the monolayer cells will not be destroyed when the nest is moved away, and culture medium loss via capillary action between the nested wall and pore wall can be prevented.

Cell Strainer

Compatible for 250mL/225mL Conical Centrifuge Bottles

Pore Size: 40µm 70µm 100µm

Color: Blue White Yellow

Materials: Frame: Polypropylene (PP), Bottom: Nylon mesh, conforming to USP Class VI standards

The cell strainer is a sterile sieving device that quickly separates primary culture cells from cell clusters and tissues. It effectively removes cell aggregates or large particles from cell suspensions to ensure accurate subsequent experiments such as flow cytometry and cell sorting.

GVS cell strainers (compatible for 250mL/225mL conical centrifuge bottles) feature an enclosed frame side and a mesh bottom structure, with a mesh diameter of 20.5mm and a bottom frame outer diameter of 25.1mm. These specifications are tailored for GVS 250mL and 225mL conical centrifuge bottles but also compatible with most similar conical bottles on the market. The frame side includes two venting spacers to facilitate ventilation, effectively preventing mesh clogging and liquid overflow.

Features

- Mesh diameter of 20.5mm and bottom frame outer diameter of 25.1mm, compatible for most of 250mL and 225mL conical centrifuge bottles. **1**
- The strainer's frame side features two venting spacers for enhanced ventilation, effectively preventing mesh clogging and liquid overflow. **2**
- Enclosed frame sides minimize residual samples.
- Extension edge of the strainer frame allows for aseptic operations.
- Frame and edge can be marked in different colors for easy handling and identification.
- The bottom consists of an evenly distributed nylon mesh, ensuring reliable and consistent experiment results.
- Blister packaging features a groove design for easy access. **3**
- Sterilized by irradiation to SAL 10⁻⁶; DNase/RNase-free, non-pyrogenic, an non-cytotoxic.

Small Cell Strainer

Compatible with 1.5mL-15mL Centrifuge Tubes, Flow Cytometry Tubes and Culture Tubes

Pore Size: 40µm 70µm 100µm

Color: Blue White Yellow

Materials: Frame: Polypropylene (PP), Bottom Mesh: Nylon, conforming to USP Class VI standards

The cell strainer is a sterile sieving device that quickly separates primary culture cells from cell clusters and tissues. It effectively removes cell aggregates or large particles from cell suspensions to ensure accurate subsequent experiments such as flow cytometry and cell sorting.

GVS small cell strainers feature a split design with separate upper and lower cups, with a mesh diameter of 16.9mm, a lower cup inner diameter of 19.2mm, and a funnel outer diameter of 8.5mm. The upper cup of the small cell strainer is designed for filtration and collection, while the lower cup features a two-stage slot that enhances its compatibility. Additionally, the special venting spacers and air slots in the lower cup effectively prevent mesh clogging and liquid overflow.

Features

- Split Design: The innovative split design allows for the inverted collection of residual cells into the upper cup, effectively minimizing sample loss ①
- Special venting spacers ② and air slots ③ in the lower cup prevent mesh clogging and liquid overspill, ensuring smooth filtration
- Wide compatibility: suitable for most centrifuge tubes, flow cytometry tubes, and culture tubes on the market with an inner diameter greater than 9mm and an outer diameter less than 19mm
- Strainers of different pore sizes can be stacked for one-step sequential filtration, enhancing efficiency
- The frame handle supports aseptic operation, reducing the risk of contamination during handling
- Evenly distributed nylon mesh bottom, providing consistent experimental results
- The easy-to-tear individual packaging facilitates sterile operation and prevents contamination
- Sterilized by irradiation to SAL 10⁻⁶; DNase/RNase-free, non-pyrogenic and non-cytotoxic

Cell Culture

Compatible Tubes/Bottles

Instruction for use

Filtration

Connect the strainer to a 15mL centrifuge tube and add the cell suspension into the upper cup for filtration.

Inversion

Invert the upper cup, connect the strainer to another 15mL centrifuge tube, and rinse back any residue on the strainer mesh.

Stacking

Stack strainers of different mesh sizes for sequential filtration of varying cell sizes. Note that larger mesh pore size are above smaller ones.

Cell Scrapers

Cell Scrapers: The specially designed cell scraper features a turning function to ensure that an ideal angle is maintained during cell collection, which makes it convenient for manually harvesting adherent cells from culture vessels.

Rotatable Cell Scrapers: The blade angle of the cell scraper changes with a slight pressure on the handle using the forefinger, which pushes the handle downward towards the floor of the culture vessel.

Specification

- Length: 25 cm 39 cm
- Materials: Blade: TPE, Handle: ABS, conforming to USP Class VI standards
- Blade Specification: 2.0 cm 3.0 cm

Features

- Two blade specifications available: scraper and lifter
- Specially designed to make the process of scraping and collecting cells easier and more effective
- Ultra-thin, flexible swivel blades are easy to use, reducing cell damage
- Easy removal and collection of cells using a scraping or lifting motion
- The 25 cm cell scraper is suitable for T25 and T75 culture flasks, while the 39 cm cell scraper is designed for other culture flasks/spinner bottles with higher capacities
- Individually wrapped
- Sterilized by irradiation, SAL 10⁻⁶
- DNase/RNase-free, non-pyrogenic and non-cytotoxic

Serological Pipette, Plastic

GVS offers serological pipettes in six different volumes, available individual pack and bulk pack, with general color code for each volume.

All our serological pipettes are manufactured out of the highest grade resins and are certified to be RNase, DNase, DNA, pyrogen, and ATP free.

Mini Serological Pipettes

- **Purpose:** Use for liquid transfer
- **Materials:**
Pipette: GPPS (General polystyrene), compliance with USP Class VI
Filter: PO (Polyolefin)

Features

- Temperature: -20°C to +50°C
- Available in individually packed in peel-to-open wrap
- Negative graduations up to -3mL (total volume = 8mL)
- Graduations are calibrated for accurate dispensing to within ±2%
- DNase/RNase free
- Non-pyrogenic
- Sterilized by irradiation SAL10-6 (ISO11137)
- Shelf Life: 3 years after month of production
- Manufactured in a class 100,000 room environment
- Manufactured under ISO13485 and ISO9001 quality management system

Flake Microcarrier

The flake carrier is a highly hydrophilic flake carrier, which uses vacuum plasma surface treatment technology and chemical grafting modification technology to enrich the flake carrier with more hydrophilic groups such as amino, hydroxyl or carboxyl groups, so that the cell adhesion performance of the carrier is stronger, which is not only suitable for subculture of Vero cells, HEK293 cells, CHO cells, BHK21 cells, ST cells, SF9/21 cells, etc., but also for CEF cells, PAM cells and CAR-T cells. Culture of primary cells.

Features

- Double surface hydrophilic modification technology, treatment strong cell adhesion performance.
- Efficiently and simply isolate cultures and cells, harvest products, and perform perfusion or continuous fed-batch culture.
- Autoclavable.
- Can be used in packed bed bioreactors, single-use

bioreactors, culture vessels, shake flasks to provide sufficient surface area for cell growth. - High area/volume ratio, high cell density.

- Multiple tension structures ensure that nutrients in the medium are in full contact with cells, which is conducive to cell growth.

Spherical Microcarrier

The spherical carrier is a spherical microcarrier formed by bonding diethylaminochloroethane on agarose microspheres, which makes cells easy to attach. It is also the most widely used microcarrier for adherent cell suspension culture. , mainly used for the research and development and production of biological products. It is suitable for subculture of Vero cells, HEK293 cells, Mrc-S cells, CHO cells, BHK21 cells, MDCK cells, ST cells, Marc14S cells, SF9/21 cells, etc. It is also suitable for CEF cells, PAM cells, myeloma cells and culture of primary cells such as CAR-T cells.

Cells were cultured for 24 h
(100x)

Cells were cultured for 48 h
(100x)

Cells were cultured for 72 h
(100x)

Cells were cultured for 96 h
(100x)

Features

- Efficient and simple isolation of cultures and cells, harvesting of products, perfusion or continuous feeding.
- It can be cultured in large-scale stirred bioreactors, single use bioreactors and shake flasks to provide sufficient surface area for cell growth.
- High area/volume ratio, high cell density.
- It is easy to enlarge the cells. The cells can be digested from the carrier and then inoculated into the new carrier, or the new carrier can be directly added to realize the "ball-to-ball" method to expand the culture.

Square Media Bottle

Ultra Clean Versions

Square media bottles have excellent gas barrier properties for storage and sampling of active pharmaceutical ingredients and bulk intermediates, and are also ideal for the preparation and storage of buffers, serum, culture fluids, or long-term storage of pH-sensitive liquids. The bottle is sterile and shatterproof with ergonomic square design, easier to use.

- Made of polyester (PET, PETG) with polypropylene cap.
- It is produced by injection stretch blow molding process, which has stronger gas barrier ability, high gloss of the bottle body, smooth inner and outer walls, the solution does not hang on the wall.
- Light weight, impact resistance, material can withstand -70°C low temperature, chemical resistance, good stability.
- High transparency, and the bottle body has a molded scale, which is convenient for visual observation of the solution volume.
- Cobalt 60 sterilization treatment, no pyrogen, no DNase, no RNase.
- The square ergonomic design is easy to grip and saves space.
- Anti-leakage, the lid and the bottle mouth cooperate more closely, and multiple control to ensure no leakage.

Note: This product does not support high temperature autoclave, only for storage. Can not be used as heating container.

PETG Bottle with Septum Cap

Description

1000ml, Sterilization(Gamma 25kgy)

The septum cap is a sterile sampling sealing cap specifically designed for square culture medium bottles. It allows for sterile sampling, liquid addition, or inoculation via needle puncture without opening the cap, effectively reducing the risk of external contamination and ensuring a sterile environment for the culture medium.

Materials

Bottle: PETG **Color:** Clear

Cap: HDPE **Color:** White

Inner plug / soft rubber: TPE **Color:** Red

Features

- It exhibits excellent chemical resistance, mechanical strength, and processability, making it suitable for medical-grade contact and biopharmaceutical applications. It can withstand conventional sterilization processes
- Temperature: -70°C~+50°C
- Every bottle has graduation
- Non-pyrogenic
- Autoclavability: No
- Working volume: 1000ml
- Double-layer packaging. Every package case has labeled Lot No.
- Sterilized by gamma irradiation SAL10⁻⁶ (ISO 11137)
- Manufactured in a Class 10, 000 cleanroom environment
- Manufactured under ISO13485 and ISO9001 and ISO9001:2015 quality management system
- Shelf Life: 3 years after month of production

Carboy bottle

The main body of the carboy is made of PC material, which can withstand high temperature processing and low temperature freezing storage, and is an ideal choice for storing sterile liquids, dispensing solutions and culture media.

Features

- The bottle body is produced by ISB one step molding process, which has better appearance and overall sealing.
- A variety of liquid conversion caps and sealing caps can be selected. Handle design for easy access.
- Endurance temperature-80~125 degrees.
- Standard size of barrel mouth, which can realize seamless replacement of most liquid storage barrels.
- The carboy body has a molded scale, which is convenient for liquid distribution and use.
- Slim mouth design, the carboy body has high transparency, easy to observe the solution state. Autoclavable.

Large mouth tee cover inner piping configuration Liquid inlet: 200mm IN 3/8 OD 5/8 Platinum vulcanized silicone Tubing, Liquid end: 500mm IN 3/8 OD 5/8

General Labware

CryoNOVA Cryogenic Tube

Double injection molding instead of traditional silicone seal ring inserting, to ensure the sealing performance of the cap. Do not use Cryogenic tubes in the liquid phase of liquid nitrogen. These cryogenic tubes are suited for research and general laboratory storage of cell cultures, bacteria and other samples in the vapor phase of liquid nitrogen.

Features

- Produced from virgin PP material, the cap with a silicone gasket mounted in cap for additional leak-proof assurance
- Large writing areas for more sample information printed graduation for accurate measurement
- Sterilized and certified non-pyrogenic and RNase-free and DNase-free
- Self standing, star shaped and round bottom are available

Screw Cap Micro Tubes

The secure screw cap with O-ring seal in conjunction with the robust design makes the screw cap micro tube indispensable in your lab. They are ideal for centrifugation, transport, storage, and short-term cold storage.

Features

- Made from 100% virgin polypropylene to help ensure maximum clarity for biological-basedwork
- Uniform wall thickness to withstand RCF 12000 xg
- Knurled Cap helps you achieve a firm grip when opening and closing
- Knurls lock tube into specialty racks for single-handed operation
- Screw cap micro tubes are available with the option of multicolored caps, attached or unattached cap

Transport Tube with Swab Capture Cap

- Tube in polypropylene /Cap in polyethylene
- Transport tubes are designed for the safe storage and transport of biological materials.
- The polyethylene cap feature a swab capture design to ensure the swab can be hold securely inside the cap, making it ideal for specimen collection and protection from contamination.
- The transparent polypropylene tubes allow unobstructed viewing of the sample.
- The tubes are shatter-proof and may be exposed to freezing temperatures.
- The tubes feature a frosted writing surface to make sample identification more convenient.
- Offered in five popular sizes

Pre-Filling Transport Tube

95 kpa

- Tube in polypropylene /Cap in polyethylene
- The standard pre-filling transport tube with the perfect seal is designed for pre-filling of transport liquid medium to preserve the viability of virus or bacteria during transport, as VTM/ UTM, and biological reagent for specimen analysis, and bacteria culture media for viewing growth.
- The transparent polypropylene tubes allow unobstructed viewing of the sample.
- The tubes are shatter-proof and may be exposed to freezing temperatures.
- The tubes are self-standing with conical bottom.
- The tubes can be supplied with a label on request
- Gamma Sterile

Premium PCR Consumables Series

PCR Plates

The PCR plate is the carrier of an amplification reaction system in Polymerase Chain Reaction (PCR) experiments, which is widely used in genetics, biochemistry, immunology, medicine and other fields. The raw materials of the GVS PCR plates conform to USP Class VI standards. The plate surface is flat, firm and not easy to deform. The thin wall design of the tube body features good thermal conductivity and ensures high-efficiency PCR reaction.

- **Specification:** 96-well non-skirted, 96-well semi-skirted, 96-well agree fully skirted
- **Capacity:** 0.2 mL/well
- **Color:** Transparent, white
- **Material:** Polypropylene (PP), conforming to USP Class VI standards

Features

- Thin tube wall design, uniform thickness, rapid and uniform heat transfer, reliable results and strong repeatability.
- The plate surface is flat and firm, resistant to warping, and remains reliable and non-deformable in automated, high temperature and high pressure (121°C, 20 min) processes, high-speed centrifugation (2000 ×g) and other operations.
- The edge of the wells protrude to prevent cross-contamination and to facilitate sealing, which can effectively reduce the evaporation of samples after sealing.
- Black letter markings to help quickly identify and trace samples when manually adding samples.
- Transparent and white plates are available. The white PCR plate is good for reading low-signal fluorescence values, reduce background fluorescence interference, and are more suitable for qPCR experiments.
- The plate type conforms to SBS/ANSI international standards; high adaptability and compatible with many mainstream brands of PCR/qPCR instruments.
- Each well is tested for 100% leak tightness to ensure safe sample handling.
- Human-derived DNA-free, DNase/RNase-free, pyrogen-free, PCR inhibitor-free, ATP-free.

General Labware

Thin tube wall design,
uniform thickness

The edge of the wells is
protruding to prevent cross-
contamination and to
facilitate sealing

PCR Tubes

The disposable PCR tube of GVS, with a capacity of 0.2 mL, is made of polypropylene (PP) conforming to USP Class VI standards. When used as the carrier of a PCR amplification system, it can repeatedly withstand high and low temperatures. For low-and medium-throughput PCR/qPCR experiments, the disposable PCR tube is an ideal solution.

- **Specification:** 8-tube strip, single-tube
- **Color:** Transparent, white
- **Material:** Polypropylene (PP), conforming to USP Class VI standards

Features

- Thin tube wall design, uniform thickness, rapid and uniform heat transfer, reliable results and strong repeatability.
- Support high-RCF centrifugation (10000 ×g), autoclave sterilization (121°C, 20 min) and other operations.
- The tube cap fits perfectly with the body, ensuring a strong sealing performance. This effectively reduces the evaporation rate.
- Different markings at the head and end of the joint cap for easy identification of direction.
- Transparent and white tubes are available. The white PCR tube is good for reading low-signal fluorescence values and reduces background fluorescence interference, and is more suitable for qPCR experiments.
- DNase/RNase-free, human-derived DNA-free, PCR inhibitor-free, ATP-free, pyrogen-free.

Thin tube wall design,
uniform thickness

The tube cap is well matched
with the body, good sealing

Different marks at the head
and end of the joint cap for easy

PCR Plate Sealing Film

GVS PCR plate sealing film can be used for routine 96-well PCR experiment, qPCR experiment, sample storage, etc. Two types of common PCR microplate sealers and qPCR microplate sealers are available.

Common PCR Plate Sealing Film

- **Material:** composed of PP material conforming to USP Class VI standard in the upper layer and medical grade adhesive in the lower layer
- **Thickness of sealing film:** 50 μ m
- **Temperature tolerance range:** -80°C to 121°C

Economical and easy to use, suitable for mainstream PCR plates; Good sealing, low evaporation, prevents cross-contamination of samples between wells.

qPCR Plate Sealing Film

- **Material:** The qPCR plate sealing film is composed of a layer of high-transparency PP sealer conforming to USP Class VI standard and medical grade adhesive
- **Thickness of adhesive sealer:** 50 μ m
- **Temperature tolerance range:** -80°C to 121°C

Innovative adhesives ensure a safe seal without sticking to skin and gloves; Good sealing, low evaporation, prevents cross-contamination of samples between wells; No autofluorescence, suitable for fluorescent quantitative PCR.

Cuvettes

Cuvettes are a common consumable in spectral laboratory analysis. The GVS cuvettes are made of transparent polymer, polystyrene (PS), for its good chemical compatibility, and can be used for optical determination of most polar organic solutions, weak acidic solutions and weak alkaline solutions.

Materials: Polystyrene (GPPS), conforming to USP Class VI standards

Features

- Available as standard type and semi-micro type (spectral range: 400 nm to 800 nm, optical path: 10 mm)
- Made of high-quality optical plastic with good chemical compatibility
- Thanks to precision optical processing technology, the optical performance error of the light transmission surface is $\leq 0.3\%$
- Recessed window reduces the risk of scratches during use. Matte surface provides an ideal labelling and operating area.
- The semi-micro cuvette is marked with a light path arrow to ensure the consistency of projection direction.

Centrifuge Tube Stands

The centrifuge tube stands are suitable for 2.0 mL, 15 mL and 50 mL conical-bottom centrifuge tubes. They can be used in combination with conical centrifuge tubes in the laboratory.

- **Materials:** Polypropylene (PP), conforming to USP Class VI standards

Features

- The holes are designed for both 2.0 mL standard micro centrifuge tubes and 15 mL and 50 mL conical centrifuge tubes.
- The multi-hole design of the tube stand allows for accommodation of three 2.0 mL micro centrifuge tubes, three 15 mL centrifuge tubes and one 50 mL centrifuge tube.
- Can be cleaned for re-use
- The product is designed in the shape of a round table, making it extremely stable
- Working temperature range:-80°C–121°C
- Sterilized and non-sterilized available, sterilized by irradiation to SAL 10⁻⁶
- DNase/RNase-free, non-pyrogenic

Freezing Box

Cross-Linked Polyethylene Foam with a Solid State Core, in combination with a -80°C freezer, will provide alcohol-free freezing at the rate of -1°C/minute that is ideal for cryopreservation of most cells and cell lines

- For 12 standard 1.0 mL to 2.0 mL cryogenic vials.
- Ease to use, freezing profiles are consistent and reproducible.
- Alcohol and fluid-free freezing, lowest cost of use than alcohol-based devices.
- High cell recovery and cell viability.
- Exposed vial tops when lid is open for quick, organized removal of frozen samples.

Collection Plates

GVS Collection Plates are molded from high-purity polypropylene (PP), which is highly stable. The outstanding properties are excellent solvent resistance (including DMSO, ethanol and isopropanol), thermally resistance and low residual. The collection plates are international ANSI/ SBS standards-compliant design with alphabetical marks.

Features

- Withstand high speed centrifugal force 3000-4000 g
- Tolerant to autoclave at 121 °C for 20 min
- 4.6/3.5/2.2/2.0/1.6/1.0 mL deep well plates and 0.4/0.36 mL microplates are available

COLPLRB96C195WRA	96-Channel Reagent Reservoirs, 195mL	10 Pcs/Box

Sterile Sample Bags

Meet all your collection, storage and transport needs, ensuring the sterility and integrity of your samples for testing

GVS sterile sampling bags are the ideal choice for collecting, storing, and transporting solid, semi-solid and liquid samples. This product is made from FDA-approved pure polyethylene material, with an average thickness greater than similar products on the market, ensuring higher strength and durability.

GVS sterile sampling bags are produced using extruded polyethylene film tubes, eliminating the need for heat sealing on the sides, with only a tear-off seal at the top and a heat-sealed bottom, thus removing potential hazards associated with side heat sealing. Additionally, the absence of side heat sealing allows users to easily open the bag, facilitating the insertion of various samples.

Sterility assured

GVS sterile sampling bags are produced using extruded polyethylene film tubes with a temperature range of 220°C to 240°C ensuring that the interior of the finished product reaches a sterile state. Throughout the production process, these bags remain in a closed environment, preventing exposure to the outside, which further guarantees sterility until the moment the user opens the packaging.

To ensure product sterility, we conduct batch sampling

of all raw materials and perform independent testing, including assessments for aerobic and anaerobic bacteria, as well as various colony culture experiments. Only after confirming that the raw materials have undergone comprehensive sterility testing do we proceed to the processing stage. The finished products also undergo multiple stringent sterility testing procedures to ensure the quality and safety of the final product.

More advantages

- **Easy Tear Design** Utilizes an easy tear structure for quick opening, ensuring user-friendly operation.
- **Secure Bottom Seal** The bottom is sealed using a thermal sealing process to guarantee reliable closure and prevent leakage of contents.
- **Small Handle Design** Allows for quick opening while maintaining the maximum opening angle for easy sample insertion.

- **Diverse Options** Offers various sizes and sealing solutions to accommodate different sampling needs
- **Transparent and Marking Options** Available in transparent bags or versions with writable labels for easy sample observation and information recording.

Product Application

- Laboratory
- Medical industry
- Environment detection
- Evidence collection
- Food industry
- Agriculture
- Livestock farming
- Daily chemical industry

Aseptic sampling bags are specialized tools designed for the collection, storage, and transportation of biological samples. They are widely used in various fields, including laboratories, healthcare, food, daily chemicals, agriculture, environmental monitoring, and industry. Their main features include excellent sterility and sealing properties, ensuring that cross-contamination and sample degradation are avoided during the collection and transfer process.

GVS can also meet customers' personalized needs in specific applications

- **Customized sizes and specifications:** Customers can specify the size, thickness of the bags to suit specific uses.
- **Material selection:** Options for different materials, such as polyethylene and nylon, are available to meet requirements for breathability and chemical resistance.
- **Printing logos and designs:** Company logos and relevant information can be printed on sterile sampling bags to enhance brand image and recognition.
- **Compliance with standards:** Customized products will comply with industry standards, ensuring the sterility of materials and production processes.
- **Personalized service:** Consulting and sample confirmation services are provided to ensure the final product meets usage requirements.

Full-page filter Sterile Sample Bags

Features

- The outer layer is a reinforced multi-layer composite film
- The middle layer is a full-width filter membrane made of pure polyethylene
- Filter membrane pore size: less than 280 microns.
- Can be used with homogenizers
- Sampling, homogenization, and filtration completed in one step.

Stand-up Sterile Sample Bags

Features

- Outer layer reinforced multi-layer composite membrane, offering superior durability and protection performance.
- Stand-up design, making sample collection more efficient.
- K-shaped bottom seal, enhancing standing support and ensuring safety during sampling and storage.
- Facilitates better fluid sampling, resulting in smoother operation.
- Writable label area for records, convenient for subsequent data management and tracking.

Blender Bags

Suitable for almost all homogenizers available on the market

Features

- **Aseptic Design**

Subjected to strict aseptic processing to ensure no contamination occurs during sample collection and handling.

- **Transparent Structure**

Typically made from transparent materials, facilitating observation of sample status and monitoring the degree of homogenization.

- **Vacuum Packaging**

Utilizes vacuum packaging to extend shelf life, ensuring the stability and effectiveness of samples.

- **Durable Materials**

Made from high-toughness and pressure-resistant materials, capable of withstanding the impact and pressure during the homogenization process.

- **Filtration Function**

Offers multiple filtration models to reject impurities, making detection simpler.

- **Specific Capacities**

Available in various capacities options to meet different experimental and processing needs.

Single Zipper Standing Sterile Sampling Bag/Homogenizer Bag

Features

- **Sterile Design:** Each sampling bag undergoes strict sterilization to ensure a microbe-free sampling process.
- **Sealable Structure with Pressure Strip;** The pressure strip design ensures a secure seal, preventing sample leakage and guaranteeing safe transportation.
- **Upright Design:** The upright structure is stable, making it convenient for sampling, mixing, and weighing, thus enhancing laboratory efficiency.
- **Excellent Homogenization Performance,** Ample space ensures thorough mixing of samples, making it suitable for various types of samples.
- **Wide Applicability:** Suitable for multiple fields, including food, beverages, biotechnology and environmental monitoring.

Double Zipper Leak-Proof Standing Sterile Sampling Bag/Homogenizer Bag

Features

- Double seal leak prevention: Dual protection completely eliminates the risk of sample leakage
- Strict sterilization: Ensures that the risk of microbial contamination minimizes
- Easy operation: Vertical design facilitates sampling, mixing, and weighing
- Excellent homogenization: Ample space ensures thorough mixing of samples
- Wide applicability; Suitable for various fields including food, beverages, and biotechnology.

Custom Sterile Liquid Sample Bags

1.

Sterile liquid sampling bags are high-performance bags designed for the sterile collection transportation, and storage of liquid samples.

2.

Their upright structure and unique twist-cap design ensure the safety and convenience of the samples.

3.

The top is equipped with a twist-cap of optional diameter allowing customers to choose different sizes according to their needs to fit various sampling tools.

4.

The bag body can be customized with personalized printing according to customer requirements, including company logos and product information, to enhance brand image.

5.

High-energy electron accelerator irradiation technology is used for sterilization, ensuring a reliable and long-lasting sterile state, effectively eliminating bacteria and microorganisms.

6.

This product is widely used in medical testing, environmental monitoring, the food industry, and other fields, making it an ideal choice for laboratory and on-site sampling.

Solution Bottle

GVS solution bottles are ideal for specialty chemicals, diagnostics, biologicals, reagents, adhesives and veterinary pharmaceuticals. HDPE packaging bottles are excellent for storage, shipping and packaging of liquid reagents.

- Lab quality wide-mouth and narrow-mouth bottles.
- Liner less caps provide the ultimate in leakproof protection
- Ideal for storing, shipping and packaging liquids
- HDPE/PP bottles available
- Available with 8ml/15ml/30ml/60ml/125ml/250ml/500ml/1000ml
- Natural and amber are available
- Leakage test: vacuum, 95KPA 30mins
